

SPA / Angular task

Technology:

- C# ASP.NET MVC5
- Angular

Requirements:

- SPA (single page application)
- Responsive design - ok to for example use Bootstrap

Functionality:

- Search for products, matching products will appear in products list
- Category list
- Click a category in category list to see products in category in products list.

Notes:

- Data in models (products and categories) should just be hardcoded in project and not read from a DB etc.
